

Finding the Computer Name and Workgroup/Domain Name in Windows XP, Server 2003, and Server 2008

This article is part of a series - [Networking Instructions for PowerChurch Plus](#). If your server/host computer is not Windows XP, Server 2003, or Server 2008 go back to the main article and click the appropriate link for Server Setup for your Windows version.

To find the computer name and workgroup/domain name:

- Right click the mouse on My Computer and choose Properties.
- On the window that opens, click on the Computer Name tab.
- There you will find the Computer Name and Workgroup or Domain name.

Take note of this for your workstation setup later.

Return to the [Networking Instructions for PowerChurch Plus](#) article and move on to the Sharing the PowerChurch folder section.
